

Scottish Borders Produce Ltd will be **LEAF Marque certified** by harvest 2023.

Winter wheat typically requires **20kg less of N per hectare** following vining peas compared to winter wheat after any other non legume crop.

Vining peas provide ideal habitat and nutrition for pollinators and can enhance this with IPM measures such as trap crops and **beneficial insect predators**.

Vining peas **improve soil structure, health and organic matter**. One-pass min-till systems minimise soil compaction while helping to maintain soil moisture and nutrients.
